NINTENDO LIFE: "In fact, it's the editing tools that really are the star of the show. Rather than settling for preset samples in each style, you're completely free to edit every clip or even create your own using a straightforward editor. You can alter the pitch, voice and speed of your sample, and even add effects such as delay and

panning. It's surprising how much power you have to create the sounds you want, from complete melodic control to getting just the right amount of delay on your snare... Rytmik is the Flipnote Studio of the musical world: accessible, versatile and a lot of fun..."
